

Abstract of the Disclosure

5 A method and a wireless transceiver are used for
requesting and processing information. A first
information query is transmitted by the wireless
transceiver and information is returned by a service
provider via a wireless network to the requesting
wireless transceiver. The information query is provided
with a predefined first validity time value and the
10 returned information, in particular in the form of short
messages, is provided with a predefined second validity
time value by the service provider.
